PURPOSE: To provide a conical pen point, the tip of which elastically deflects and deforms by the pressure applied at writing so as to easily change the thickness of the line to be written.

CONSTITUTION: A conical pen point consists of a pen point member 11 having a cylindrical base 12 and a conical portion made of combtooth-like pieces 110b continuous with the base and center cores for guiding ink, which are arranged so as to extend in the pen point member so as to elastically contact the tips of respective combtooth-like pieces with one another. When the apex part consisting of the tips of the combtooth-like pieces is pressed obliquely to the axis center line of a pen, the pen point deforms elastically so as to be able to control the thickness of the line to be written.
